BED BUG PREPARATION SHEET

Bed bugs bite, leaving welts and are very likely to infest the entire building if not treated properly and promptly.

- Prior to the arrival of the technician all areas of the unit must be thoroughly cleaned and vacuumed.
- All linens, blankets and sheets must be laundered in detergent and hot water and all beds shall remain stripped for the treatment. Please note if offsite laundering is to be done, when transporting laundry use plastic disposable garbage bags, discard bags and bring clean laundry back in new clean bags.
- All items must be moved away from the walls so that baseboards may be accessible.
- Upon completion of the treatment, all areas must be thoroughly vacuumed and the vacuum bag be discarded.
- Treatment will include a thorough crack and crevice treatment, as well as, treatment to the carpets and baseboards. The Material Data Safety sheet is available for your review at your request.
- However, to ensure a thorough and effective treatment the preparation must be followed prior to the treatment date.
